

Crash Indicator BASIC Factsheet

Crash Indicator Overview

What is the Crash Indicator BASIC? The Crash Indicator Behavior Analysis and Safety Improvement Category (BASIC) is one of seven categories that the Federal Motor Carrier Safety Administration (FMCSA) uses to determine how a motor carrier ranks relative to other carriers with a similar number of safety events (i.e., inspections, violations, or crashes). At present, the Crash Indicator BASIC can only be seen by enforcement personnel or by a motor carrier that is logged into its own safety profile; it is

not publically available. FMCSA defines the Crash Indicator BASIC as histories or patterns of high crash involvement, such as frequency and severity. It is based on information from State-reported crashes that meet reportable crash standards. The Crash Indicator BASIC uses crash history that is not specifically a behavior but instead the consequence of a behavior or set of behaviors. The consequence of a behavior(s) can point to a problem that needs attention. State-reported crashes raise the percentile rank of the Crash Indicator, which indicates lower safety compliance. FMCSA's Safety Measurement System (SMS) does not currently factor in crash accountability; the agency is researching how this may be incorporated in the future.

How do motor carriers know where they stand? SMS determines an overall BASIC status for each motor carrier based upon roadside inspection results that are reflected as a percentile rank and/or prior investigation violations. This information can be seen by logging into the SMS Website (https://ai.fmcsa.dot.gov/sms/). Once logged into the SMS Website, a motor carrier with safety compliance problems in the Crash Indicator BASIC will see a warning symbol in that BASIC. You can also view the records of your company's crashes and request a review of any records you think are inaccurate through DataQs.

What documents associated with this BASIC should motor carriers keep? If an investigation is conducted, Safety Investigators (SIs) may request from motor carriers these types of documents: carrier data from their Accident Register and accident reports required by State or other governmental entities/insurers (for example, Police Accident Reports). Motor carriers should keep documents required by the Federal Motor Carrier Safety Regulations (FMCSRs), and know that SIs may use them to assess the nature and severity of safety problems.

How can motor carriers and their drivers improve safety performance in the Crash Indicator BASIC? Motor carriers and drivers should know that their State-reported crash history matters. Their safety performance will be assessed based on how many crashes they've been involved in, when they happened, and how severe they were. Drivers need to understand how to operate a commercial motor vehicle (CMV) safely in order to avoid crashes.

Motor carriers should know how to comply with the FMCSRs and improve their percentile rank in the Crash Indicator BASIC. Carriers should provide up-to-date mileage figures on their MCS-150 biennial updates, which are used in the Crash Indicator calculation. They should also educate their drivers about safe driving practices, ensure their drivers know and understand safety regulations, and help them to understand what they can do to prevent crashes. Ultimately, more knowledgeable and law-abiding drivers will lead to fewer crashes and fewer crashes mean safer roads.

Motor carriers should know crashes adversely affect SMS results for 24 months and that only not having crashes will improve motor carriers' BASIC percentile ranks. Also, they should check out the "What can a motor carrier do to improve?" section of the SMS Information Center for answers to commonly asked questions about safety performance.

This is an official U.S. government publication, produced and disseminated by the Federal Motor Carrier Safety Administration. CSA is FMCSA's enforcement and compliance program to improve large truck and bus safety and ultimately reduce CMV-related crashes, injuries, and fatalities. For more information about CSA, visit http://csa.fmcsa.dot.gov
